

# MATE DOLIDZE

## GAMEPLAY PROGRAMMER – AI & SYSTEMS

*Gameplay Programmer with 5 years of professional experience and 2 shipped titles. Strong background in Unity gameplay engineering, and recent work developing C++ gameplay, AI systems and production-ready tools in Unreal Engine. Comfortable collaborating with designers, artists and technical teams to iterate on gameplay features and deliver robust systems in production environments.*

## WORK HISTORY

### **UNANNOUNCED STEALTH PROJECT** Unreal / C++

*(Contract Gameplay Programmer, 2025-2026)*

- Built **3C character systems** (movement, stance, camera) supporting stealth-driven gameplay and responsive control.
- Developed **state-driven animation and camera system** adapting gait, stance and aim for both cinematic & precise control.
- Architected **squad-based AI system** with shared perception and coordinated multi-agent stealth behaviors.
- Built **data-driven squad decision pipeline** (C++/Blueprint/Data Assets) for designer-tunable squad behavior.
- Implemented **world-level patrol system** with reusable routes and policies reducing **Behavior Tree** complexity.
- Collaborated with designers and animators to align gameplay systems with production constraints.

### **ALPACA DASH** Unity / C#

*(Gameplay Programmer at Kind Knight Games, 2023-2025)*

- Built data-driven **tutorial framework** (ScriptableObjects, UI highlights, event-driven triggers) enabling designers to author content without engineering support.
- Developed **procedural track generation system** (Bezier splines, vector math, JSON-driven data) supporting live tuning across shipped tracks.
- Engineered **dynamic camera framework** (Cinemachine) adapting perspectives to gameplay states and improving high-speed readability.
- Automated **environment import pipeline** (Blender Python, Unity editor tools) saving 20+ hours per map across 4 shipped environments (~900 assets).

### **DEFI-LAND** Unity / C#

*(Gameplay Programmer at Kind Knight Games, 2021-2023)*

- Built **map editing system** with backend persistence (API integration) enabling player-driven world customization.
- Developed **modular shooting system** with configurable targets, power-ups, and backend driven round logic.
- Engineered **fishing gameplay system** with procedural input sequences, dynamic scoring, and tension-based mechanics.
- Built **harvesting gameplay system** with vehicle-based resource collection, fuel management, and delivery loops.

### **MERGE-HEROES** Unity / C#

*(Gameplay Programmer at AppIdea, 2020-2021)*

- Implemented **character ability system** with custom behaviors and VFX for a mobile merge RPG, supporting scalable ability variation.

## PERSONAL WORK

### **FIRST-PERSON AI SYSTEMS DEMO** Unreal / C++

*(Solo Project, 2025)*

- Built **AI behavior system** (Behavior Trees, State Trees, Perception) driving patrol, search, lurk and combat behaviors.
- Developed **AI vision component** using vector math and spatial queries for distance, angle and occlusion-based scoring.
- Designed **stealth interaction system** enabling player-driven AI manipulation through sound, light and environment.

### **MAGE ABILITY DEMO** Unreal / C++

*(Solo Project, 2025)*

- Built an **ability system** (GAS) with animation-driven execution, input handling and VFX integration for reusable combat abilities.

## EDUCATION

### **Mathematics & Computer Science (MACS)**

*Free University of Tbilisi*

### **Game Development Program (Unreal Engine)**

*Vertex School*

## SKILLS

**Programming Languages:** C++, Blueprint, C#, Python

**Game Engines:** Unity, Unreal Engine

**Platforms:** PC, Mobile, WebGL

**Source Control:** Git, Perforce, Diversion
